HOTEL BED LINEN

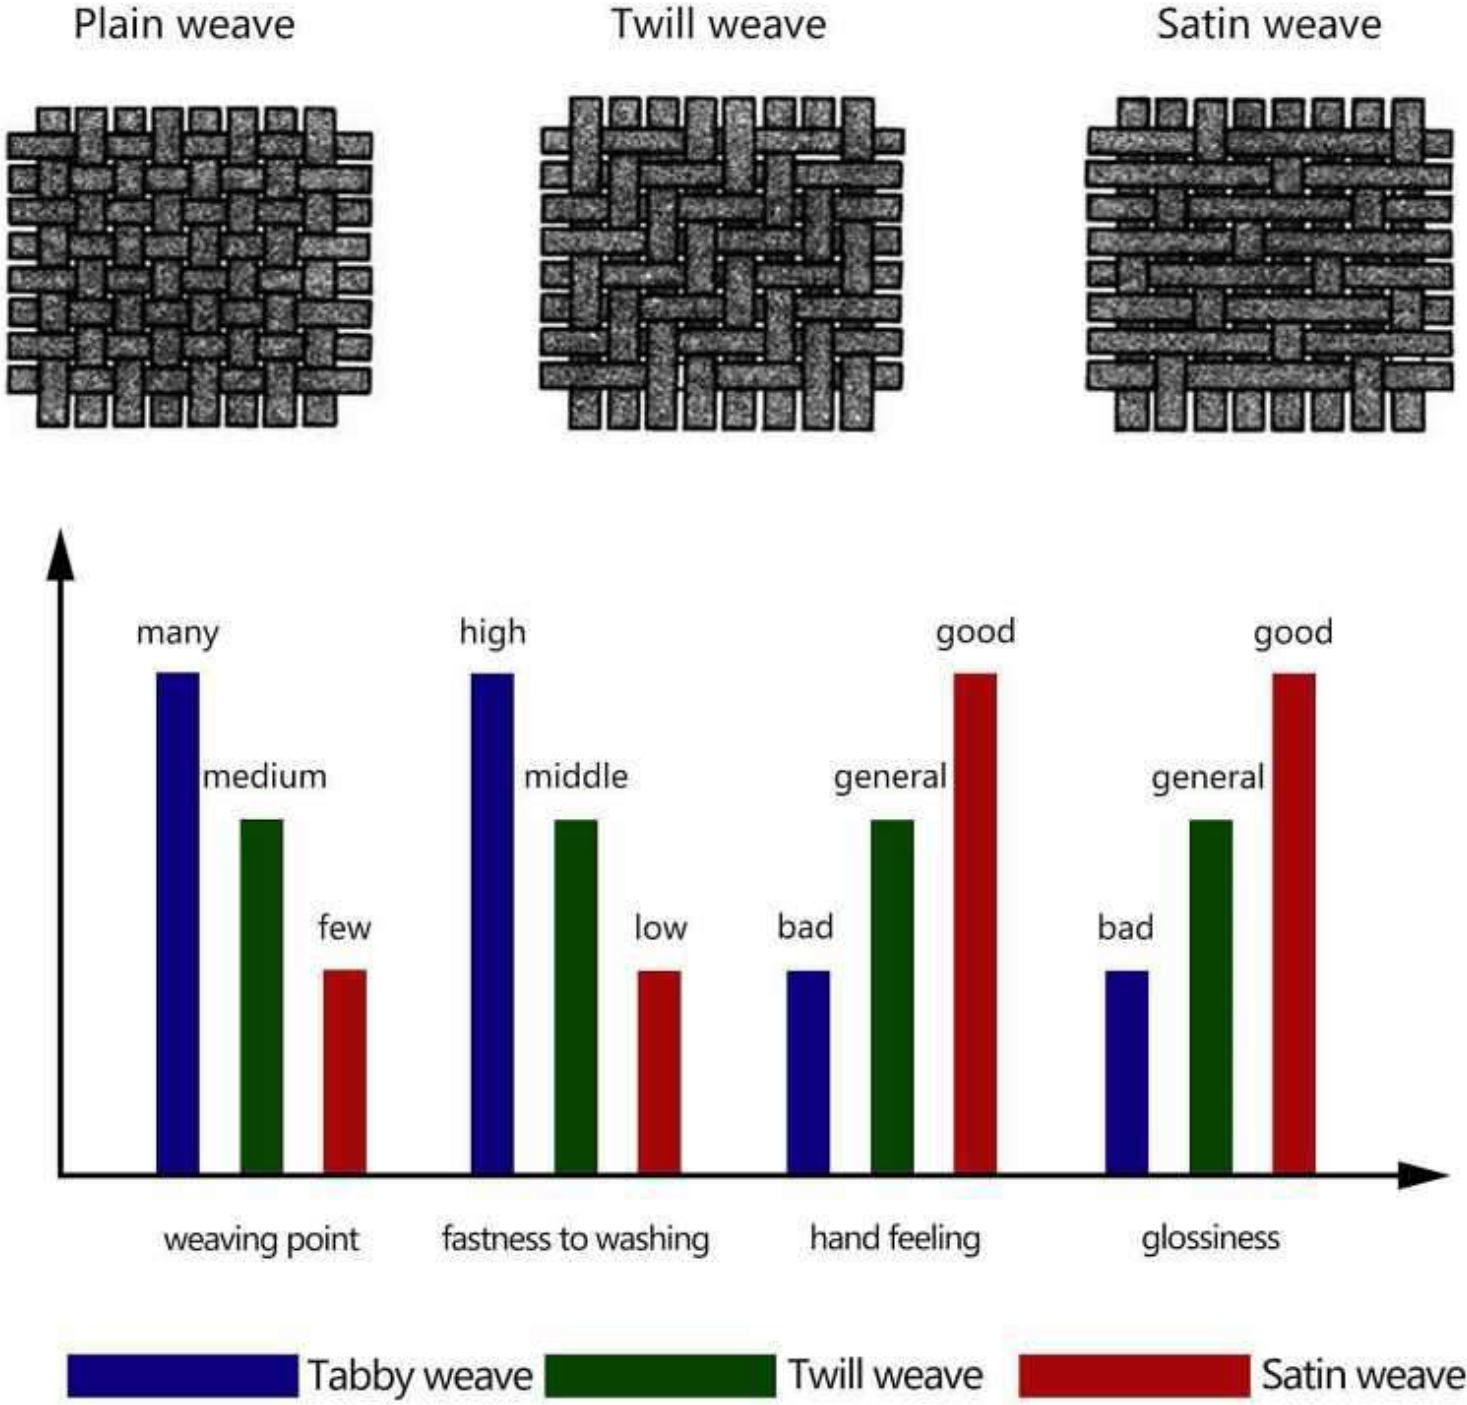

CARFULLY CHOSEN
HIGH-QUALITY YARN

Good cotton, good yarn, good fabric

PERFORMANCE COMPARISON DIAGRAM OF VARIOUS FABRIC

100S SEA ISLAND COTTON BEDDING SET

For a long time, island cotton has been known as "cashmere texture, silk luster" in the world, because of its unique texture and soft feel, known as "the gem on the fiber"; The bed woven with island cotton shows silk luster. When you touch the bed, you will be deeply attracted by its touch like cashmere.

≥ 33cm

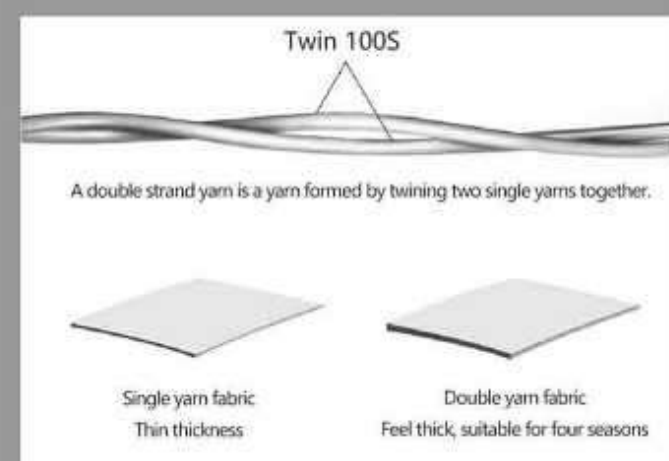

Long and soft and fine fibers

≥ 50%

Reflectivity 50% higher than other cotton

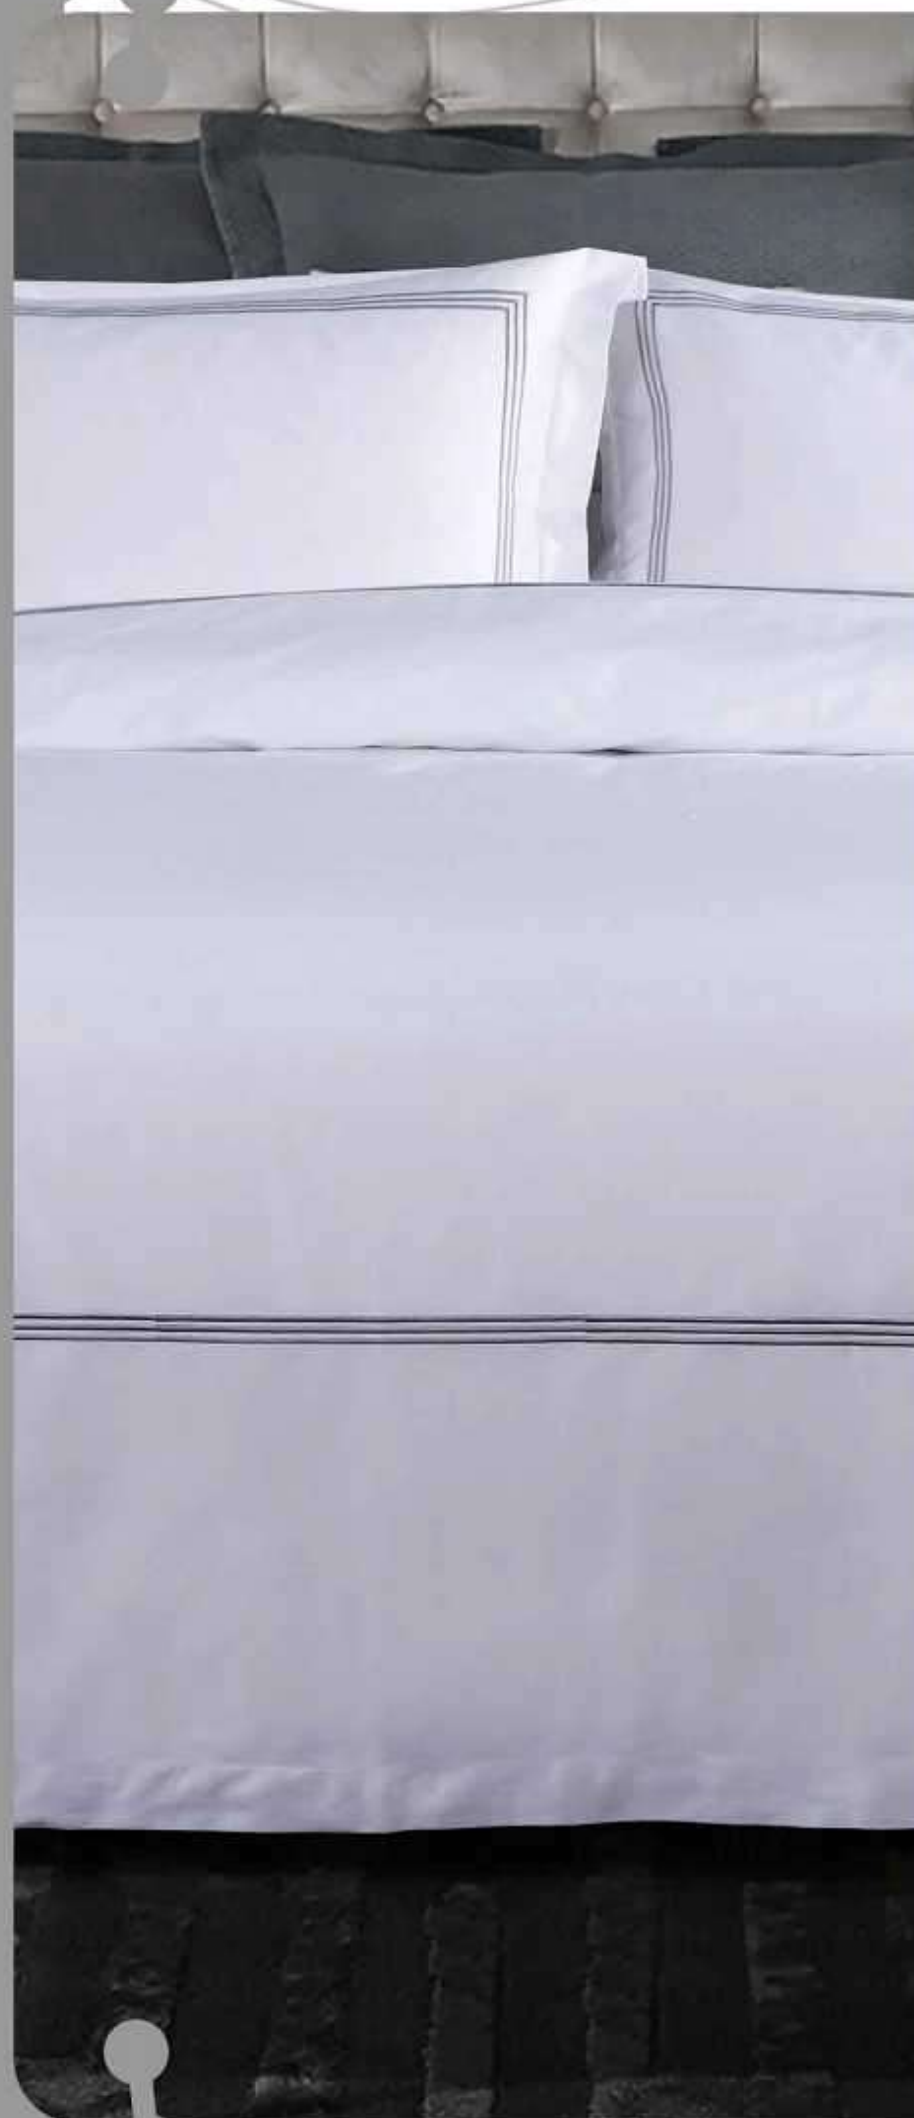

≥ 3000h

Overlength sunshine fibers ripen

SUPER HIGH 100S DOUBLE YARN

The higher the count of yarn, the thinner the yarn, the higher the requirement of raw material cotton, the softer and more comfortable the fabric is, just like the texture of silk, but the corresponding fabric is also thinner. Therefore, in order to solve the problem that the cloth is too thin, we further adopted the double-ply process.

What is island cotton?

Island cotton is an excellent cotton fiber in the world. It was successfully planted in Saint Simon Island, Georgia in 1786, so it was named "Island cotton". The fundamental difference between island cotton and ordinary cotton is the length and strength of its fibers. The longer length of the island fiber increases the softness and gloss of the fabric, while minimizing wear and pilling. The fabric woven with island cotton has excellent tactility, good air permeability and sweat absorption. Moreover, because island cotton is full of luster and high affinity to dyes, the fabric color is bright and bright, which is far beyond the comparison of other cotton fabrics.

80S LONG STAPLE COTTON SATIN BEDDING SET

SELECTED FIRST GRADE LONG STAPLE COTTON OF XINJIANG

"Extremely soft" begins with xinjiang long-staple cotton

Xinjiang has unique natural conditions, soil is alkaline, summer temperature difference is big, sunshine is sufficient, photosynthesis is sufficient, the growth time is long, has created high-quality cotton, cotton is softer, fiber strength is higher, skin-friendly sex is better.

WHAT IS SATIN FABRIC?

Satin fabric is a kind of fabric with satin weave, which has complicated weaving technology. The warp and weft are interwoven at least once every three yarns, so the satin weave makes the fabric denser and therefore thicker. Satin weave products are more comfortable and breathable than similar tabby and twill weave products.

SELECTED 80S FABRICS

80 fabrics, by 400 cotton yarn composition, fabric texture more outstanding. The higher the count, the longer the fiber pulled by the 1g yarn, the thinner the fiber. Only high-quality cotton can pull the longer fiber. The higher count means high-quality cotton raw material.

01 Soft Touch

80 fabrics, high support and high touch feeling silky comfortable.

02 Silk luster

Sateen is woven with fine luster which is not available in ordinary fabrics.

80S SUPIMA COTTON BEDDING SET

The raw material is selected from Supima horse cotton, the finest cotton in the United States. American horse cotton has a long reputation in the world, known as the "platinum in cotton", the United States is the world's important horse cotton production area, because of its internal quality, its price is particularly expensive in the world.

Supima cotton is mainly grown in the United States, Peru; Also found in small quantities in other places, such as Israel and Australia, Supima cotton belongs to the ultra-long-fiber cotton of fine fiber, a name that dates back to 1910, when it was grown in the southwestern United States. Supima cotton is the whitest cotton seed in the world, is the noble in cotton fiber, luster comparable to silk. The length of its cotton-wool fiber is 40% longer than that of ordinary cotton, which greatly increases the softness and glossiness of the fabric and makes it more comfortable. Horse cotton is 45 per cent more pliable than ordinary cotton, making it an exceptionally resilient product with lighter but more durable fabrics. At the same time fabric drape stronger, more stylish products.

GLOBAL
PRODUCTION

2%

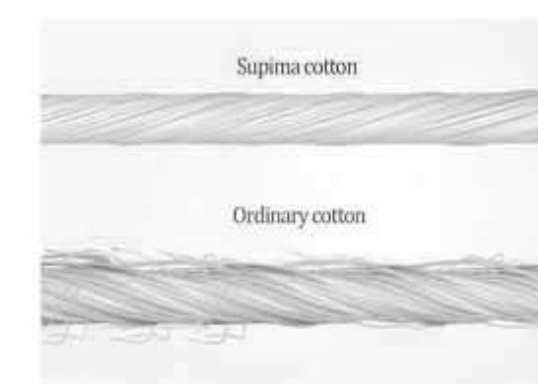

BORN COMPLACENCY

If it is not possible to plant horse cotton between April 10 and 15 each year due to weather, it will not be able to be planted that year. As a result, the annual output of horse cotton is very limited, less than 2% of the global cotton output.

THREE ADVANTAGES OF SUPIMA

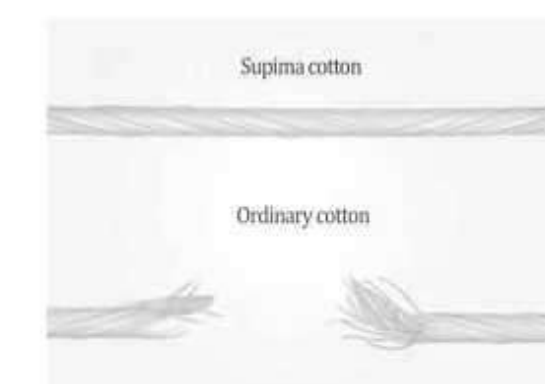

1 Long fiber Prevent pilling

The length of the wool fibers in Supima cotton is 40 percent longer than normal cotton, up to 50mm, which greatly increases the softness and glossiness of the fabric. Less fiber ends are exposed, which reduces wear and prevents pilling.

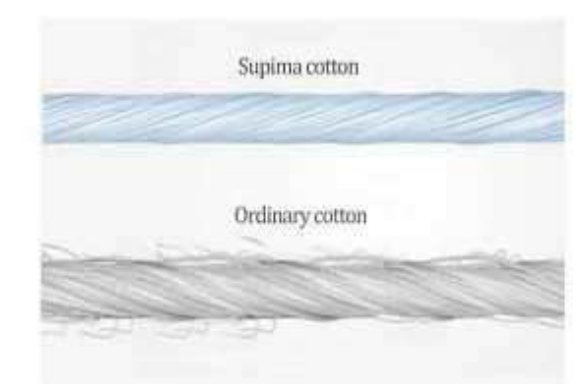

2 Strong toughness 45% higher

Supima cotton is 45 per cent stronger and more resilient than regular cotton, which makes pima cotton extremely resilient and durable even in lighter fabrics.

3 High activity of fiber High color fastness

Supima cotton is more active than regular cotton, so it stains more easily and has a stronger color fastness. This means that even if you use horse cotton for many years, it will still retain its bright colors.

TENCEL BEDDING SET

Botanic Fibers

From wood to fiber

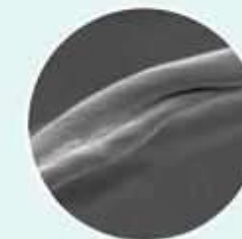

TENCEL® fibers come from nature and make use of photosynthesis which has, since the beginning of time, been an important mechanism in nature and the basis for life on earth. In photosynthesis the energy from the sun is absorbed by various dyestuffs, primarily green chlorophyll, and converted into chemical energy. In this respect, the starting products of carbon dioxide and water are converted into dextrose and oxygen. The more TENCEL® fibers you have, the more oxygen.

Forest Wood Pulp Fiber

Wool

Cotton

TENCEL® fibers

Properties

Softer than silk

On the day that the TENCEL® fiber were invented, a new chapter was written in the history of fibers. Textiles of TENCEL® fiber are more absorbent than cotton, softer than silk and cooler than linen.

Ecological prduction

Closed loop process

The unique closed loop process makes TENCEL® fibers the fibers of the future since the solvent used is recycled by almost 100% in the closed loop process. This special process received the "European Award for the Environment" from the European Union.

BAMBOO BEDDING SET

ANTIBACTERIAL

Bamboo is naturally antibacterial which helps to protect against skin irritation and allergies making it suitable for sleepers that suffer from eczema, sensitive skin or hay fever caused by dust mites.

CLIMATE CONTROL

Temperature regulating technology will keep the material cool in the summer and warm in the winter. This is all thanks to the highly breathable bamboo cover which keeps the air flowing.

SUSTAINABLE RESOURCE

Bamboo is a sustainable resource which is one of the world's fastest and densely. Bamboo uses 1/3 of water compared to other plants.

100% BAMBOO BEDDING SET

The 100% bamboo fabric used in our bed linen is incredibly soft, smooth and luxurious and is available in all popular bed sizes.

LUXURIOUSLY SOFT

The nature of the fabric gives our 300 thread count a feel comparable to that of 1,000-1,200 in other fabrics such as cotton. Its luxurious softness is retained wash after wash without using fabric softeners.

SECURED

The Bamboo Duvet Cover features four secure straps located on each corner. These are used to keep the duvet cover and duvet perfectly in place, all night.
